- 1. There are two Leuna plants in the USSR, one is at the confluence of the Angara River and Lake Baikal and produces organic and inorganic chemicals, the second is at Kimry on the Volga River and produces synthetic pasoline.
- 2. Herr Bulitz, a leading German synthetic gasoline expert at Kimry, returned to Germany (Russian Zone) on the grounds of ill-health.

Production at Leunawerk, Merseburg.

3. Kontakt 5058 is being produced again at Leunaworke, the output is 190 tons per month and is distributed as follows:

Zeitz

30 tons

Stalinwork, Nost

60 tons

USSR

100 tons

The production is to be increased to 300 tons per month. Leguttke is the official in charge of production.

4. Two chambers, consisting of a total of eight ovens, have been working at capacity, since September 1950, on the production of gasoline by the hydrogenation of brown coal. Production began in July 1950. The monthly capacity of the two chambers is 15,000 tons.* During October 1950, production was running at an approximate annual rate of 200,000 tons (16,667 tons per month). Gasoline, 76 octane, is being produced, but plans have been made to produce aviation lubricating oil. These plans were expected to mature by January or February 1951. The by-products of the synthetic gasoline plant were not being utilized as of October 1950.**

5.	The production of nitrogen during October was approximately 750 tons per day. Part of this output was dispatched to Farbenfabrik Wolfen, but most of it was being used for the production of asmonium sulphate. The Russians continued t prohibit the production of nitric acid.	
		25 X 1
*	stated that eight chambers were ready to go into production but the only one was in use. A production of 7,855 tons per month was reported at the time.	
安安	Comment: The production of gasoline as stated here would seem to be his the output during October would appear to exceed the target and the stated capacity.	_{ஹ்} 25X1
